

<p>SCREEN 1.</p> <p>The Presenter links to the website, and the first screen appears. It should look something like the image to the right.</p> <p>Notes:</p> <ul style="list-style-type: none"> I want to keep the buttons the same size and appearance as in your current version, but I want all three to appear, along with the frame which is also fine, when the webpage is linked to. When the User taps the Call Marty button, the only thing that should change is that Marty's face appears. (See below for the timing of when Marty's face appears.) 	
<p>SCREEN 2.</p> <p>The User taps the CALL MARTY button, and the following happens:</p> <ol style="list-style-type: none"> The second screen appears. It looks something like the image to the right. Marty says, <i>"Hello. It's Marty the SMARTIE. And here is your question."</i> <p>Notes:</p> <ul style="list-style-type: none"> Marty's face should not appear until he says "hello", as opposed to the current version where he appears as soon as the Call Marty button is tapped. Marty should appear only from the shoulders up as in the image to the right, not full length. <p>EVERYTHING BEYOND THIS POINT IS FINE.</p>
