

**PROJECT:** Marty The SMARTI Simulation

**OBJECTIVE:** To develop a web-based application that simulates the way the Marty The SMARTI app will ultimately work. This web-based application will be used strictly as a demo at pitch meetings.

**TERMS:** The Programmer (Todd) will be paid \$50 an hour for the following:

- 5 hours of feasibility research. (Let me know before you go over, okay?)
- A yet-to-be-determined number of hours to create the web-based application should the research prove the project viable.

**TIME FRAME:** Optimally, the simulation will be complete and ready for presentation by January 1, 2025.

**DESCRIPTION OF USER/APP INTERACTION:**

(NOTE: None of this is written in stone. Let me know if anything should - or must - be changed.)

1. The User hits the Enter key and says, "Call Marty".
2. The sound of a cell phone ringing, then connecting, with another phone.
3. A still of Marty The SMARTI appears on the screen (see below) and the Voice of Marty [TBD] says, "Marty The SMARTI here! And I've got a question for you. What does it mean when you are in debt?"
4. When the User is ready, he/she hits the Enter key and says his/her answer.
5. If ChatGPT determines that the answer is correct or close enough, Marty says: "You are so right! You win a free jump to anywhere on the board!"
6. If ChatGPT determines that the answer is wrong, Marty says: "Too bad. When you are in debt it means that you owe someone money. Better luck next time!"
7. End of Interaction.

Marty The SMARTI  
(Super-Mighty ARTificial Intelligence)
